Colorful New Flowers for 1958

Awards by the All-America Selection Committee have been given this year to **Petunia F₁ Hybrid Grandiflora "MAY TIME"** (pictured on our front cover) and an **Extra Dwarf Double French Marigold "PETITE"** — described below.

PETUNIA F₁ Hybrid grandiflora "MAY TIME". An enchanting shade of clear, light salmon pink with slightly deeper veining. The large, slightly fringed flowers are freely produced on vigorous, compact, spreading plants with an average height of 12 inches and spread of 24-28 inches. An exquisite new color to this most popular class of Petunias.

Produces an abundance of very early blooms and continues flowering so that the foliage is scarcely visible. Grows about 6 in. tall and 10 in. wide. Ideal for flat sales.

Petite Orange. Fully double, bright orange.

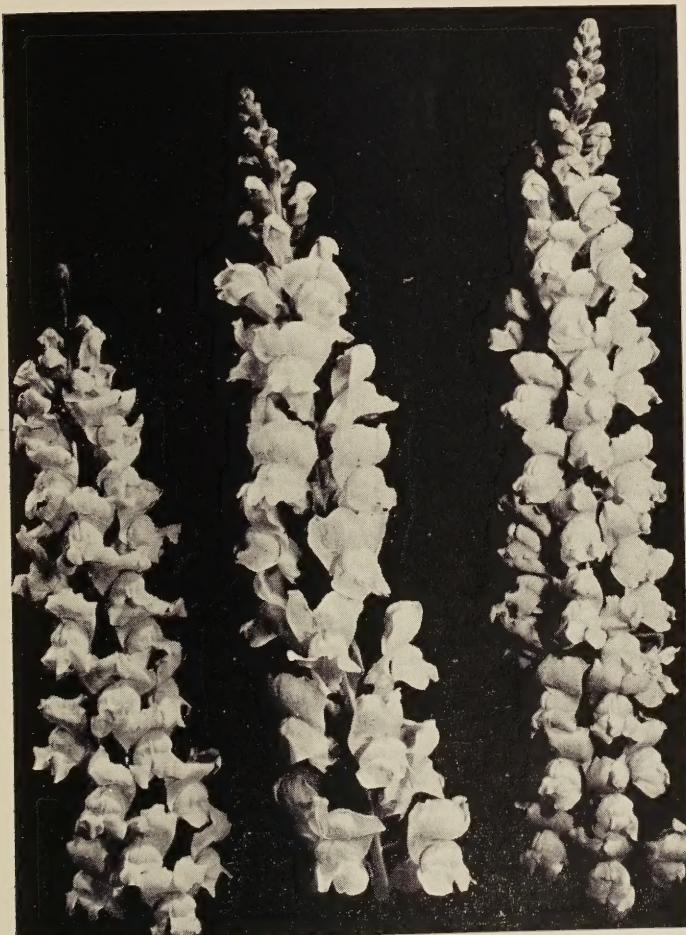

Petite Yellow. Fully double, clear yellow.

Petite Gold. Fully double, between orange and yellow.

Petite Harmony. Golden anemone crest with deep mahogany guard petals.

F₁ Hybrid Outdoor Antirrhinum

F₁ HYBRID SNAPDRAGONS FOR OUTDOOR

The advantage of F₁ Hybrid Snapdragons for outdoor is marked by strong growth of the plants as compared with straight varieties; the difference in vigor is quite conspicuous between them. They are not only uniform in color and growth, but found to be much earlier flowering on top of the extreme vigorous and floriferous habit, thus they stay in flower for a longer period than any straight varieties.

Originator's "Sakata in Japan" varieties—which he describes as follows.

Medium Pink. Comparable to "Memory" but clearer colored flower.

Deep Rose. Trifle brighter in its beautiful rose color and probably with heavier spikes than "Mexicali Rose".

Dark Red. Comparable to "Temptation" but little darker, otherwise similar.

Bright Red. Trifle brighter in color than "Temptation".

Orchid. Cattleya orchid or lavender color comparable to "Bold Venture".

White. Almost pure white, much whiter than "Bob White" and looks superior to it in size of flower and spike.

Yellow. Bright yellow, comparable to "Star Dust" but trifle lighter; very good.

F₁ Hybrid Formula Mixture. Blend of above 7 colors.

ASTER "Dwarf Queen Wilt Resistant" Plants grow 10 inches tall and have outstanding lasting quality in the home when used as potted plants. Grown in 2 1/4 inch pots permits selecting plants of uniform size when panning up 2 or more plants per pot. Grown in 3 or 4 inch pots they make unusually nice plants singly. For spring blooming seeds should be sowed late in October through early December. From October to April, they are grown with lights from sunset until 10 p.m., from the time they emerge until they show color. For summer pot sales seeds should be sowed during the spring months and plants may be shaded during the day time from May to September from the time the buds show color (lights off) until in full bloom.

- Annual Flower Seeds -

Of the most important items listed we have indicated the number of seeds per ounce to better enable you to figure the amount of seed you'll need for your planting requirements. Keep in mind that you cannot expect every seed to germinate f.i. most large seeds germinate from 60 to 80 percent under normal germinating conditions, sometimes a higher percentage is obtained, which means that a little more seed is required to obtain the number of plants desired.

STOCKS—(Continued)

TRYSONIC. 42,000 S. Seed of Trysomic Stock will produce in excess of 86% doubles if properly handled, according to the following instructions:

Trysomic Stock singles are smaller and weaker than the doubles in the seedling stage. Therefore, the practice of sorting or segregating Trysomic Stock seedlings by size results in a division of plants into doubles and singles with but few borderline exceptions.

Through such sorting 86% of a grower's flats will be of a slightly higher double count than the normal 86% from Trysomic Stock seed. Sorting of Trysomic seedlings into flats is not recommended, take all plants as they come, they will produce about 86% doubles.

Trysomic 7 Weeks Mixed. For growing in warmer climates. Plant first throws a central spike of bloom some 6 inches or more in height, then goes to produce numerous side branches throughout its growing period, eventually forming an attractive branching plant from 12 to 15 inches in height. $\frac{1}{2}$ Tr.
